WoodChuck Sharp Edge

Manufactured from the highest quality alloy steel and custom made in North America, these teeth provide superior performance in very specific applications, such as Forestry Slash, Whole Logs and Scrap Wood. It is critical that the material is free from any contaminants, metal (ferrous), sand/dirt (aggregate) and leaves which are often very abrasive.

Carbide Weld Overlay

It is recommended that you inspect your used tips and note the location of major wear. On a 4 pass tip if the sides are worn away before the corners and cutting edges are completely worn, you may want to replace with a 6 pass tip to protect your holders from premature wear. In most cases you will find the most severe wear on the corners of the tips only. This information can be used as a guideline to determine your future tip purchases, and help you reduce your operating costs!
